

Proposed Solution

Project Title: Import Data using Transform Maps (Spreadsheet)

Project Overview:

This project focuses on efficiently importing structured employee data from an external spreadsheet into the ServiceNow platform using Import Sets and Transform Maps.

Objective:

The primary objective is to simplify and automate the employee data import process, ensuring accurate data mapping, faster processing, and improved data integrity.

Scope:

The project covers spreadsheet preparation, Import Set creation, Transform Map configuration, field mapping, data transformation, validation, duplicate prevention using Coalesce, and employee data reporting.

Problem Statement:

Manual entry of bulk employee data into ServiceNow is time-consuming and may result in data-entry errors and duplicate records.

Impact:

Solving these issues improves data accuracy, reduces manual effort, prevents duplicate records, and makes employee data management more efficient.

Proposed Solution

Approach:

Use ServiceNow **Import Sets and Transform Maps** to import employee data from an Excel spreadsheet and map the source fields to the appropriate target table fields.

Key Features:

- Import employee data from Excel/Spreadsheet.
- Create an Import Set table for staging data.
- Create a Transform Map for source-to-target field mapping.
- Use Coalesce to prevent duplicate employee records.
- Validate imported and updated records.
- Create Reports and Dashboard for employee data monitoring.

The original project documentation confirms that the workflow uses an Import Set, Transform Map, field mapping, transformation, Coalesce, Reports and Dashboard.

Resource Requirements

Resource Type	Description	Specification / Allocation
Platform	Application platform	ServiceNow
Data Source	Employee data	Excel / Google Spreadsheet
Data Processing	Import and transformation	Import Sets & Transform Maps
Data Storage	Employee records	ServiceNow Database
Data Integrity	Duplicate prevention	Coalesce
Reporting	Data visualization	ServiceNow Reports & Dashboard
