

Solution Architecture

Project Name: Import Data using Transform Maps (Spreadsheet)

Architecture Flow

Presentation / Client Layer

ServiceNow Platform UI

- Load Data
- Employee Test Table
- Reports & Dashboard

Application / Processing Layer

Import Set → Transform Map → Field Mapping → Transform

Data / Storage Layer

ServiceNow Database

- Employee Import Table
- Employee Test Table

External Data Source

Excel / Google Spreadsheet

- Employee ID
- Employee Name
- Email
- Department
- Location

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the interface to upload employee spreadsheet data and view employee records, reports and dashboards.	ServiceNow Platform UI

Component Name	Description / Role in Architecture	Technologies Used
Import Set	Acts as a staging area where spreadsheet data is loaded before transformation.	ServiceNow Import Sets
Transform Map	Maps source spreadsheet fields to the corresponding target Employee Test table fields.	ServiceNow Transform Maps
Core Processing	Processes and transforms the imported employee data and applies field mappings.	ServiceNow Transform Engine
Data Integrity	Identifies existing employee records and prevents duplicate records during repeated imports.	Coalesce
Database	Stores the imported and transformed employee records.	ServiceNow Database
Reporting / Dashboard	Provides visual monitoring and analysis of employee data.	ServiceNow Reports & Dashboard

The project documentation confirms that the spreadsheet is loaded into an Import Set table, then a Transform Map maps the source fields to the Employee Test target table.

Simple architecture:

Excel/Spreadsheet → Import Set → Transform Map → Employee Test Table → Reports & Dashboard.
