

Solution Requirements

Team ID: SWTID-2026-5963

Team Size:5

Project Name: Import Data using Transform Maps (Spreadsheet)

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	The system should allow authorized ServiceNow users to securely access the employee data import functionality.	High
2	Authorization Levels	The system should provide appropriate access to HR Administrators and ServiceNow Administrators for importing, transforming, updating, and viewing employee data.	High
3	External Interfaces	The system should accept employee data from an external Excel/Spreadsheet file through the ServiceNow Import Set functionality.	High
4	Transactions Processing	The system should load spreadsheet data into the Import Set table and transform it into the Employee Test table using a Transform Map.	High
5	Reporting	The system should generate employee reports based on Department, Location, and Employee details and display them through the Employee Analytics Dashboard.	Medium
6	Business Rules, etc.	The system should use Coalesce with Employee ID to identify existing records and update them instead of creating duplicate employee records.	High
7	Compliance to Laws or Regulations	The system should ensure that employee information is accessed and managed only by authorized users according to the organization's data-management and privacy requirements.	Medium
8	Other	The system should provide transform history/status information to identify successfully	High

S.No	Requirement Category	Requirement Description	Priority
		inserted, updated, or ignored records after an import.	

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system should process spreadsheet employee data efficiently without unnecessary delay.	Import and transformation should complete within an acceptable processing time for the uploaded dataset.
2	Scalability	The system should support increasing numbers of employee records and repeated spreadsheet imports.	The system should process larger employee datasets without affecting normal ServiceNow operations.
3	Security & Data Privacy	Employee information should be accessible only to authorized users and protected from unauthorized access.	Access should be controlled through ServiceNow roles and permissions.
4	Reliability & Availability	The import and transformation process should provide consistent results and clearly indicate success or failure.	Import state should show Completed/Success or the appropriate error status, and transform history should be available.
5	Usability & Accessibility	The import process, field mapping, reports, and dashboard should be easy for HR/System Administrators to understand and use.	Users should be able to upload data, run transformations, verify records, and view reports with minimal steps.
6	Maintainability	The solution should allow administrators to modify field mappings, transform rules, reports, and dashboard	Transform Maps, field mappings, reports, and dashboard components should be configurable without

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
		configurations when requirements change.	redesigning the complete solution.
