

Technology Stack

Project Name: Import Data using Transform Maps (Spreadsheet)

Architecture

S.No	Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Platform UI	Provides an easy interface to upload spreadsheet data, configure Import Sets and Transform Maps, and view employee records.
2	Backend / Server-Side	ServiceNow Import Sets & Transform Maps	Processes the imported spreadsheet data and maps source fields to the appropriate target table fields.
3	Database / Data Storage	ServiceNow Database	Stores employee records and imported data securely in ServiceNow tables.
4	Cloud / Hosting / Deployment	ServiceNow Cloud Platform	Provides a centralized cloud environment for running the application and managing employee data.
5	Version Control & CI/CD	ServiceNow Update Sets	Helps capture and move configuration changes between ServiceNow instances.
6	Third-Party APIs / Other Tools	Microsoft Excel / Google Spreadsheet	Used to prepare and provide structured employee data that can be imported into ServiceNow.

Short justification:

The selected technologies support the complete workflow of preparing spreadsheet data, importing it into ServiceNow, transforming and mapping the data, storing employee records, and managing the solution. The project document specifically uses a spreadsheet as the external data source and ServiceNow Import Sets and Transform Maps for processing.
