

Performance Testing

Team ID: SWTID-2026-5963

Team Size:5

Project Name: Import Data using Transform Maps (Spreadsheet)

Step 1: Testing Overview

Field	Details
Testing Tool Used	ServiceNow Transform History and Import Set monitoring
Type of Testing	Import Performance / Load Validation
Target Module / API	Import Set, Transform Map, and Employee Test table
Test Environment	Hosted ServiceNow Instance
Test Date	29 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Upload employee spreadsheet into the Import Set	1	Not measured	Spreadsheet data should load successfully into the staging table.
2	Run Transform Map for employee data	1	Not measured	Employee records should be transformed and loaded successfully.
3	Repeat import with existing Employee IDs	1	Not measured	Existing employee records should be updated without creating duplicates.
4	Import spreadsheet containing new and existing employees	1	Not measured	New records should be inserted and existing records should be updated correctly.

Step 3: Performance Test Results

Note: The following performance metrics were not measured using a dedicated load-testing tool in the project. Therefore, actual values are marked as **Not Measured** rather than being estimated.

S.No	Metric	Target Value	Actual Value	Status	Remarks
1	Response Time (Avg)	< 2 seconds	Not Measured	Not Tested	No dedicated performance measurement was recorded.
2	Response Time (Max)	< 5 seconds	Not Measured	Not Tested	No dedicated performance measurement was recorded.
3	Throughput (Req/sec)	Project dependent	Not Measured	Not Tested	Import processing was validated functionally.
4	Error Rate	< 1%	Not Measured	Not Tested	Transform History was checked for import results.
5	CPU Utilization	< 80%	Not Measured	Not Tested	No infrastructure-level CPU measurement was recorded.
6	Memory Utilization	< 80%	Not Measured	Not Tested	No infrastructure-level memory measurement was recorded.

Step 4: Observations & Analysis

- Employee spreadsheet data was successfully loaded into the Import Set.
- Transform Map processing was used to move data from the staging table to the Employee Test table.
- Employee ID was used as Coalesce to identify existing employee records.
- New employee records were inserted and existing records were updated.
- Repeated imports were checked to ensure that duplicate records were not created.
- Transform History was used to verify inserted, updated, and ignored records.
- Functional import validation was completed successfully.
- Dedicated response-time, throughput, CPU, and memory measurements were **not recorded** for this project.

Step 5: Screenshots / Evidence

The following screenshots can be attached as evidence:

1. **Import Set / Load Data screen**
2. **Transform Map configuration**
3. **Coalesce configuration with Employee ID**

4. **Transform History showing inserted and updated records**
5. **Employee Test table showing imported records**
6. **Employee Analytics Dashboard**

Performance Testing Evidence: To be attached from the ServiceNow instance if available.
