Import Data using Transform Maps (Spreadsheet)

Introduction :

Project Title: Import Data using Transform Maps (Spreadsheet)

Team ID: SWTID-2026-5963

Team Size: 5

Team Leader: M. Mahalakshmi

Team Leader Mail ID: mahalakshmimayalagu14@gmail.com

Team Member: C. Keerthana- Mail ID: keerthanachelladurai2007@gmail.com

Team Member: M. Nisha- Mail ID: nisham15012007@gmail.com

Team Member: C. ManiMekalai-Mail ID: c.manimekalai814@gmail.com

Team Member: V. Mahalakshmi-Mail ID: vellaisamymaha50@gmail.com

Description:

This micro project focuses on importing structured data from an external spreadsheet into the **ServiceNow** platform using Import Sets and Transform Maps. The project simulates a realworld scenario where bulk employee data is received in Excel format and must be migrated into ServiceNow efficiently and accurately. The spreadsheet data is first loaded into an Import Set table, which serves as a staging area, and a Transform Map is then configured to map source fields to the appropriate target table fields. Upon executing the transformation, records are created in the target table and validated to ensure data integrity. This project helps beginners understand the end-to-end data import process in ServiceNow, including data loading, field mapping, transformation execution, and result verification.

Step by Step process:

Phase 1: Prepare the sheets

1. Open New Google Spreadsheet
2. Create New Google Spreadsheet with sample data as shown below

Employee ID	Name	Email	Department	Location
100001	Jones, James	james.jones@company.com	ServiceNow	Mountain View
100002	DeVey, Olga	olga.devey@company.com	ServiceNow	Mountain View
100003	King, James	james.king@company.com	ServiceNow	Mountain View
100004	King, James	james.king@company.com	ServiceNow	Mountain View
100005	King, James	james.king@company.com	ServiceNow	Mountain View
100006	King, James	james.king@company.com	ServiceNow	Mountain View
100007	King, James	james.king@company.com	ServiceNow	Mountain View
100008	King, James	james.king@company.com	ServiceNow	Mountain View
100009	King, James	james.king@company.com	ServiceNow	Mountain View
100010	King, James	james.king@company.com	ServiceNow	Mountain View
100011	King, James	james.king@company.com	ServiceNow	Mountain View
100012	King, James	james.king@company.com	ServiceNow	Mountain View
100013	King, James	james.king@company.com	ServiceNow	Mountain View
100014	King, James	james.king@company.com	ServiceNow	Mountain View
100015	King, James	james.king@company.com	ServiceNow	Mountain View

3. Download the spreadsheet as Sample Spreadsheet.xlsx format.

Phase 2: Create new Custom table

Navigation:

- Tables > Create New

- Label: Employee Test
- Name: u_employee_test
- After creating and saving the **Employee Test** table, **scroll down** to the bottom of the table form.

- Click **Show Form** to open the table form.

- On the form, locate the **Form Context Menu / Additional Actions** option on the left side of the form header.
- Click the **FormContext Menu / Additional Actions** icon.
- Click configure , select **Form Layout**.

- The **Form Layout** page will open, where you can configure the fields displayed on the form
- After opening **Form Layout**, click **New** to create a new field.
- Enter the field details:
- **Column Label:** Employee ID
- **Type:** String
- Click **Add** to create the field.
- Repeat the same steps to create the following fields:
 - **Employee Name** – Type: String
 - **Email** – Type: String
 - **Department** – Type: String
 - **Location** – Type: String
- After creating all the required fields, click **Save**.
- Verify that the newly created fields are displayed on the **Employee Test** form.

Click on Submit or Save.

Phase 3: Import Set Table

Navigation:

In Application Navigator → Load Data

Click on Load Data and create an import table

Fill details as shown below

- Label: Employee Import
- Name: u_employee_import (auto populated)

- Click on Submit

Once we click on Submit, we can see the success message as shown below.

Also we need to make sure to click on Create Transform Map.

Phase 4: Create Transform Map

In this phase we need to create the Transform Map by clicking on the Create Transform Map button as shown in above screenshot.

Give inputs as shown below.

Name: Sample Spreadsheet Import

Source Table: Employee Import is auto-populated

Target Table: Employee Test - as we created earlier

Click on Auto Map Matching fields.

Now click on Mapping Assist and map the fields with Source & Target Table

Click on Save

Make sure the both Source & Target table fields are mapped as shown below.

- Now click on Transform as shown below

- Now click on Transform Button as shown below.

- After clicking Transform, make sure you see the success message as shown below.

Phase 5: Transform Data & Validate

Navigation:

- Open Employee Test Table from application navigator as shown below.

- As our import got succeeded, all the records are created in the Employee Test Table.

Employee ID	Name	Email	Department	Location
000001	John Doe	john.doe@company.com	IT	San Francisco
000002	Jane Smith	jane.smith@company.com	Marketing	New York
000003	Mike Johnson	mike.johnson@company.com	Finance	London
000004	Sarah Lee	sarah.lee@company.com	Operations	Chicago
000005	David Kim	david.kim@company.com	HR	Los Angeles
000006	Emily White	emily.white@company.com	Legal	San Diego
000007	Robert Brown	robert.brown@company.com	Engineering	Seattle
000008	Lisa Green	lisa.green@company.com	Product	Portland
000009	James Black	james.black@company.com	Support	Phoenix
000010	Alice Taylor	alice.taylor@company.com	Training	San Jose
000011	Chris Evans	chris.evans@company.com	Quality	San Francisco
000012	Kevin West	kevin.west@company.com	IT	New York
000013	Nancy East	nancy.east@company.com	Marketing	London
000014	Steven South	steven.south@company.com	Finance	Chicago
000015	Michelle North	michelle.north@company.com	Operations	Los Angeles

- Make sure you rearrange the fields accordingly by using Personalised List Columns

Click on OK

Final Result:

All the records are successfully imported into the ServiceNow system with Import Set, Transform Map.

Employee ID	Name	Email	Department	Location
000001	John Doe	john.doe@company.com	IT	San Francisco
000002	Jane Smith	jane.smith@company.com	Marketing	New York
000003	Mike Johnson	mike.johnson@company.com	Finance	London
000004	Sarah Lee	sarah.lee@company.com	Operations	Chicago
000005	David Kim	david.kim@company.com	HR	Los Angeles
000006	Emily White	emily.white@company.com	Legal	San Diego
000007	Robert Brown	robert.brown@company.com	Engineering	Seattle
000008	Lisa Green	lisa.green@company.com	Product	Portland
000009	James Black	james.black@company.com	Support	Phoenix
000010	Alice Taylor	alice.taylor@company.com	Training	San Jose
000011	Chris Evans	chris.evans@company.com	Quality	San Francisco
000012	Kevin West	kevin.west@company.com	IT	New York
000013	Nancy East	nancy.east@company.com	Marketing	London
000014	Steven South	steven.south@company.com	Finance	Chicago
000015	Michelle North	michelle.north@company.com	Operations	Los Angeles

Phase 6: Enable Coalesce to Avoid Duplicate Records

- In real projects, the same employee data may be imported multiple times.
- To prevent duplicate employee records, we use **Coalesce**.
- The Coalesce will update the same records with new values if we add and the duplicate values are not inserted.

Steps:

1. Open Transform map Under System LDAP On All menus.
2. Open the Created Transform map , Name is Sample Spreadsheet Import.
3. Under Related list, select the Field maps Section and Make any one field Coalesce True which appears in False.

- Now Click submit.

- Newly Created Excel Data is this.

- It is the previously added data.

- Now, In this new data we added 4 rows of the 2 rows with the same existing data with different Name changed and Email changed.

- That Raviteja Employee Email was Changed to

[test10@gmail.com → test18@gmail.com].

- And Employee ID with SB-0004 name was changed to

[Ajay kumar → Ajay].

- And two other new Employee ID's are added.

- Now after submitting the form it appears as State Completed and Success.

- Now Click the Run transform Under the next steps.
- Then it opens Specify Import set and transform map which is previously selected transform map then Click Transform button.

- Now the State is completed and Success.
- Now again click on the Transform history then it shows the newly added data and its status of Inserted and Skipped values out the given data.

- From the above figure : total 4 rows are uploaded out of 2 are Inserted that are two new ID's.
- And 2 rows are updates that are Same ID's with different Name and different Email that we changed.
- Then Open the Employee Tests table and see the rows updated and inserted.

Employee Name	Title	Department	Location
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco
John Doe	Software Engineer	Software	San Francisco

- Now Repeat the Phase 7 with the same steps and same Excel sheet and Submit to check how many rows are updated and Inserted with the same data.
- Then Open the Transform history to check.

Job Name	State	Completed	Runtime	Job	Exported Table	Total	Inserted	Updated	Ignored	Deleted	Status	Transform Stage
John Doe	Completed	2 seconds	2 seconds	John Doe	Employee Test	4	0	0	4	0	Success	Insert Rows

- Here we can see the total 4 are uploaded.
- On that 0 rows are Inserted and updates 0 and Ignored 4 rows.
- That same sheet we uploaded to the same transform map we created.

PHASE 8 : Create Reports on Employee Test Table

Navigation Steps :

- Open All menus, Search for **Reports**.
- Under **Usage and governance** Select Reports.
- Click the **New** button to create a new report.
- Create **3 Reports** as follows.

Report 1: Employees by Department

- In Data
- Report name : **Employees by Department**.
- Source Type : **Table**.
- Table : **Employee Test**, Now click the Next button.

Title	Table	Type	Field Names	Created by	Updated on
Auto Performance Report	incident	Bar	severity, pr	admin	2020-05-08 00:00:00
Meeting notification	incident	Bar		admin	2020-05-08 00:00:00
Employee satisfaction	incident	Bar	employee, pr	admin	2020-05-08 00:00:00
Knowledge article performance	incident	Bar	article, acknowledged	admin	2020-05-08 00:00:00
Auto Response by Department Group	incident	Bar	department, group	admin	2020-05-08 00:00:00
SLA Breach by Report	incident	Bar	sla, breach, report	admin	2020-05-08 00:00:00
Compliance Report	incident	Bar	compliance, report	admin	2020-05-08 00:00:00

Configure

Report Title: Employees by Department

Table: incident

Field Names: employee, pr

Aggregation: Count

Group by: Department

Next

- Now after Clicking next in type Select **Pie chart** .
- And click the **next** button.

- Now In Configure Select Group by **Department** Field.
- In the Aggregation Field Select **Count**.
- Then Click **next**.

- Now In Style Leave the Chart color by **default**.

- And Click the **Run** button to Execute the given data Report.
- And Click **save** button to Save the Report.

Report 2: Employees by Location

Configuration

- Table: Employee Test
- Type: **Bar Chart**
- Aggregation: **Count**
- Group By: **Location**

Steps :

1. Create a New Report.
2. Report name : **Employees by Location.**
3. Table Select : **Employee Test.**
4. Select Type : **Bar Chart.**
5. In Configure Select Group by Field : **Location.**
6. And Aggregation is **Count.**
7. Now Click **Run** to Execute the Report and Click the **Save** to save the Report.

File	Title	Type	Field Name	Grouping	Updated
Search	Search	Search	Search	Search	Search
SLA Performance Trend	Employee (Employee)	Bar	employee_id	employee	2024-05-02 10:20:00
Working Satisfaction	Employee (Employee)	Bar	employee_id	employee	2024-05-02 10:20:00
Employee with SLA Violations	Employee (Employee)	Bar	employee_id	employee	2024-05-02 10:20:00
Knowledgeable or Unknowledgeable Behavior	Employee (Employee)	Bar	employee_id	employee	2024-05-02 10:20:00
SLA Breach by Response Group	Employee (Employee)	Bar	employee_id	employee	2024-05-02 10:20:00
SLA Breach by Reason	Employee (Employee)	Bar	employee_id	employee	2024-05-02 10:20:00
Completion C Trend	Customer (Customer)	Bar	customer_id	customer	2024-05-02 10:20:00

Report 3: Employee List Report.

Configuration

- Create a New Report name : **Employee List Report.**
- Table: **Employee Test.**
- Select Type: **List.**

PHASE 9 : Add Reports to Dashboard

Create Dashboard

Navigation :

- Open All menus → Search for Dashboards.
- Under Self Service → Click Dashboards.
- On the top right corner Click Create Dashboards or /
- You can create Directly by using the backend
name [PA_DASHBOARDS.FORM].
- Then Click New to Create new Dashboards.
- Only the backend name will open the form if the **ACL** has the **pa_dashboards** access to **Admin Overrides** True only.
- Then only we have access to the form.

- After Opening the ACL Search the pa_dashboards on Name Column.

- On All menus → type Reports Under **Usage and Governance** select **reports**.
- Open the **Employees by Department**.
- Select the **Edit Report** and Click the **Share** button then the right top corner Select the **Add to Dashboards** Option.
- Then Choose the Created **dashboard name** and Click **Add** button.
- Same Like that do the remaining **2 reports** in the same navigation how we added **Employees by Department**.
- The **Employees by Location** and **Employee List Report** these two reports are also added to the created dashboard.

NAME	TYPE	REPORT NAME	COMPONENT	VERSION
Employees by Department	Dashboard	Employees by Department	active	2024-05-01 00:00:00
Employees by Location	Dashboard	Employees by Location	active	2024-05-01 00:00:00
Employees by Department	Dashboard	Employees by Department	active	2024-05-01 00:00:00
SLA Performance Report	Dashboard	SLA Performance Report	active	2024-05-01 00:00:00
Meeting Qualification	Dashboard	Meeting Qualification	active	2024-05-01 00:00:00
Top Employees with SLA Violations	Dashboard	Top Employees with SLA Violations	active	2024-05-01 00:00:00
Performance Report on Customer Support	Dashboard	Performance Report on Customer Support	active	2024-05-01 00:00:00
SLA Breach by Department	Dashboard	SLA Breach by Department	active	2024-05-01 00:00:00
SLA Breach by Region	Dashboard	SLA Breach by Region	active	2024-05-01 00:00:00

- After Opening the Report Click the **View Report** Button on the right side of the Context menu.

- After Clicking the View Report button, Now Click the **Share** button and then share options are visible on the right side.
- Now click the **Add to Dashboards**.

- Now Add the Dashboard that you created called **Employee Analytics Dashboards**.
- Then Click **Add** button.
- Now the **Report** is added to the **dashboards**.
- Now, Same in the process, add the remaining **two reports** to the **dashboard**.

- From the + icon also we add widgets that our reports from there.
- If we want we can also configure the background color.

- Here the three Reports are added successfully by varying **Department , Location and List Report.**
- We can also restrict the **Users, Groups and Roles** From Share Option.

Conclusion:

1. This project successfully implemented an automated employee data management solution using ServiceNow Import Sets and Transform Maps, ensuring accuracy, efficiency, and data integrity throughout the employee onboarding and update process.
2. A key enhancement in this project was the use of Coalesce in the Transform Map. By enabling Coalesce on the Employee ID field, the system intelligently identifies existing employee records during every import. This prevents the creation of duplicate records and ensures that repeated imports update existing data instead of inserting redundant entries. As a result, the employee database remains clean, reliable, and consistent, which is critical in real-world enterprise environments where data may be imported multiple times from external systems.
3. In addition to data integrity, the project was extended with Reports and Dashboards to provide meaningful insights and real-time visibility into employee data and import activities. Custom reports were created to track:
 - Total employee records.
 - Newly added employees.
 - Updated employee records.

- Department-wise employee distribution.
- Import success and error counts.

4. These reports were then consolidated into a Dashboard, allowing administrators and HR teams to monitor employee data trends, import performance, and data quality from a single centralized view.

Dashboards improved decision-making by presenting information visually through charts and graphs, reducing the need for manual analysis.
